

Teaching Materials with HarveyAI

Step-by-step guide: teaching-material generation and assessment-design support in Harvey

Use Harvey to produce **draft teaching or assessment-support materials for educator review**, not finished resources ready for direct release.

Use cases including case analysis, IRAC summaries, structured discussion questions, lecture-note updates, grade-band feedback criteria, sample student outlines, and feedback workflows. The safest pattern is: **define the teaching or assessment purpose → provide context and source limits → generate a draft → verify → revise → document use.**

Teaching-material generation process

Planning

Step	Action	What to do	Output
1	Start with the teaching purpose	Decide what the material is meant to support: - lecture preparation, - seminar discussion, - substitute teaching, - student revision, - case explanation, or - problem-question practice.  Avoid starting with “What can Harvey make?” Start with the teaching problem.	A defined teaching use.
2	Choose a bounded task	Select a narrow output, such as - an IRAC case summary, - seminar question sequence, - issue-heading scaffold, - short explainer, - teaching note, or - revision activity. Use bounded tasks such as case summaries, issue headings, seminar structures, and source-checking plans.	A manageable teaching-material task.
3	Specify the teaching context	Provide the unit, cohort, jurisdiction, topic, intended class format, and level of detail. For law teaching, this should usually include whether the material is for first-year LLB, later-year LLB, JD, LLM, or mixed postgraduate students.	Context-rich instruction.

Preparation

Step	Action	What to do	Output
1	Provide source material where possible	Upload or paste the case, extract, statute provision, problem scenario, existing lecture notes, or reading list.  Be sure to check that you are not uploading anything that would conflict with the university's copyright obligations and that does not contain Personal Identity Information (PII) If working from Vault, use only the relevant corpus. A bounded corpus reduces unsupported output and makes checking easier.	Source-grounded draft conditions.
2	Set output limits	Tell Harvey what not to do: do not invent authorities, do not provide legal advice, do not produce a complete model answer unless explicitly required, do not exceed the jurisdiction, and flag uncertainty.	Safer prompt boundaries.

Checking and Verification

Step	Action	What to do	Output
1	Ask for a structured draft	Request a defined output format: - headings - table - sequence of questions - short teaching note - IRAC structure - issue map - discussion plan, or - annotated outline. The training recap notes that Harvey was demonstrated generating IRAC-based case summaries and structured discussion questions.	First draft teaching material.
2	Check legal accuracy	Verify every citation, legal proposition, quotation, doctrinal characterisation, and jurisdictional claim against primary sources or approved legal databases. The Harvey pedagogy guidance treats source verification as central to responsible use.	Verified or corrected draft.

3	Check pedagogical suitability	Ask whether the draft supports the intended learning outcome, avoids giving away the whole answer, matches the cohort level, and invites the intended type of student thinking.	Teaching-fit judgement.
---	--------------------------------------	---	-------------------------

Revise and Document

Step	Action	What to do	Output
1	Revise for student use	Edit tone, remove unnecessary complexity, add prompts for active learning, and ensure students still need to do the legal reasoning. Where appropriate, convert the output into an activity rather than a handout.	Student-ready teaching artefact.
2	Document verification and revision	Keep a short note recording what Harvey was used for, what sources were checked, what was changed, and what remains educator-authored.	Audit note.

Teaching-material prompt templates

IRAC-style case summary for teaching

Using only the supplied case materials, draft a concise IRAC-style teaching summary for [UNIT] students studying [TOPIC] in [JURISDICTION]. Audience: [FIRST-YEAR LLB / LATER-YEAR LLB / JD / LLM]. Purpose: support class preparation and discussion, not replace student reading. Provide: 1. Material facts 2. Procedural posture 3. Legal issue 4. Rule or governing principle 5. Application / reasoning 6. Holding 7. One teaching point 8. Two questions for class discussion 9. Matters requiring verification Do not invent authorities. Do not add propositions not supported by the source materials. Flag uncertainty.
--

Seminar discussion questions

Audience: [STUDENT COHORT]. Jurisdiction: [JURISDICTION]. Source materials: use only [SPECIFY MATERIALS]. Provide: 1. One opening recall question 2. Two application questions 3. One comparison or evaluation question 4. One likely misconception 5. One closing consolidation activity

Do not provide model answers. Identify which source or legal concept each question is designed to activate.

Draft a sequenced set of seminar discussion questions for [UNIT] on [TOPIC].

Updating lecture notes with recent case law

Compare the supplied lecture notes with the supplied recent case materials.

Task:

1. Identify where the lecture notes may need updating.
2. Suggest revised wording using tracked-change style markers: [DELETE: ...] and [ADD: ...].
3. Provide the source case and paragraph reference for each proposed change.
4. Flag any suggested change that requires educator verification.

Do not change the pedagogical structure unless necessary. Do not invent authorities or assume developments beyond the supplied materials.

Teaching-material quality checklist

Check ✓	Question
Legal accuracy	Are the authorities, quotations, and propositions correct?
Jurisdictional fit	Is the material framed for the right legal system?
Cohort fit	Is the level suitable for the students?
Teaching purpose	Does the material support the intended class activity?
Cognitive demand	Does it prompt analysis rather than passive consumption?
Source grounding	Can claims be traced to the source materials?
Student risk	Does it avoid becoming a complete substitute answer?
Educator review	Has the final version been edited and approved by the educator?
